Connected Cells in a Grid

Consider a matrix where each cell contains either a ***0*** or a ***1***. Any cell containing a ***1*** is called a filled cell. Two cells are said to be connected if they are adjacent to each other horizontally, vertically, or diagonally. In the following grid, all cells marked X are connected to the cell marked Y.

XXX
XYX
XXX

If one or more filled cells are also connected, they form a region. Note that each cell in a region is connected to zero or more cells in the region but is not necessarily directly connected to all the other cells in the region.

Problem

Given an ***n x m*** matrix, find and print the number of cells in the largest region in the matrix. Note that there may be more than one region in the matrix.

Input Format

The first line contains an integer ***n***, the number of rows in the matrix.
The second line contains an integer ***m***, the number of columns in the matrix.
Each of the next ***n*** lines contains ***m*** space-separated integers matrix[i][j].

Constraints

- **0 < n, m < 10**

Output Format

Print the number of cells in the largest region in the given matrix.

With the support of the Erasmus+ Programme of the European Union

Sample

Sample input	Sample output
4 4 1 1 0 0 0 1 1 0 0 0 1 0 1 0 0 0	5

Explanation

The diagram below depicts two regions of the matrix; for each region, the component cells forming the region are marked with an X:

```
X X 0 0        1 1 0 0
0 X X 0        0 1 1 0
0 0 X 0        0 0 1 0
1 0 0 0        X 0 0 0
```

The first region has five cells and the second region has one cell. We print the size of the largest region.
